NEVADA VITAL STATISTICS

1994 and 1995

March, 1997

Bureau of Health Planning and Statistics
Emil DeJan, Bureau Chief
State Health Division
Department of Human Resources
State of Nevada

ACKNOWLEDGEMENTS

The following individuals are recognized for:

Report Preparation:

**Jean Gunter
Vital Statistics Field Representative**

**Wei Yang
State Biostatistician**

Review and Editing:

**Emil DeJan
Bureau Chief, Health Planning and Statistics**

**Mark Hemmings
Health Resource Analyst**

**Mary Howard
Program Officer, Office of Vital Record**

State Registrar:

**Yvonne Sylva
Administrator, State Health Division**

INTRODUCTION

This report summarizes data compiled from original birth, death, stillbirth, induced abortion, marriage and divorce records filed with the Office of Vital Records as required by law. Standard forms recommended by the National Center for Health Statistics are used for all records, with the exception of marriage and divorce.

Responsibility for the filing of the **birth certificate** lies with the hospital medical records or nursing personnel, the physician, midwife, or other attendant. Funeral Directors, or persons acting as such, are legally charged with filing **death certificates** and **fetal death certificates**. County Recorders are responsible for forwarding the original **marriage certificates** or computerized tapes containing marriage data to the Office of Vital Records for maintenance of a data file. The County Clerk of each county is required to submit a **report of decree of divorce/annulment** to the Office of Vital Records within a month of the occurrence. **Induced abortion reports** are completed and sent in directly to the Office of Vital Records by the physician, hospital, or clinic. The quality of data presented in the report is directly related to the completeness and accuracy of the information contained on the certificates.

Users of this publication are welcome to offer their comments and/or suggestions concerning format, content, technical aspects of the publication, or requests for additional data by submitting them to:

Office of Vital Records
Bureau of Health Planning and Statistics
Nevada State Health Division
505 E. King St., Room 102
Carson City, Nevada 89701-4749
(775) 687-4481

THE NEVADA REGISTRATION SYSTEM

The Nevada Office of Vital Records has three distinct components:

- The Vital Records Section where public requests for certified copies and amendments of said copies are processed.
- The Quality Control/Data Entry Section where the records are checked for completeness and accuracy and then entered into a database onto the State Mainframe Computer System.
- The Statistical Section which analyzes and publishes reports based on statistics from the database and provides technical assistance to users of the data.

Vital events such as births, deaths, marriages and divorces are first recorded at the county level before being forwarded to the State Registrar, except that births in all counties but Clark and Washoe are recorded electronically, directly with the State Registrar. Abortions are reported directly to the Office of Vital Records for encoding and entering into the State's database. All records are checked for completeness and accuracy, then given a state file number before encoding and entering into the State's database. Birth and death records are kept on permanent file for certification use and amendment when necessary by the public and various government agencies. Marriage, divorce and abortion records are not maintained after entry into the State's database.

DEFINITIONS

<i>ABORTION:</i>	The termination of a human pregnancy with an intention other than to produce a live birth or to remove a dead fetus.
<i>DEATH:</i>	A person who has sustained irreversible cessation of all functioning of the brain, including the brain stem, is considered dead.
<i>DIVORCE:</i>	Termination of a marriage.
<i>FETAL DEATH:</i>	A birth that occurs after at least 20 weeks gestation in which the child shows no evidence of life after complete birth.
<i>INFANT DEATH:</i>	Deaths occurring to individuals of less than one year of age.
<i>LIVE BIRTH:</i>	A birth in which the child shows evidence of life after complete birth. A birth is complete when the child is entirely outside the mother, even if the cord is uncut and the placenta still attached. Evidence of life includes heart action, breathing, or coordinated movement of voluntary muscle.
<i>LOW BIRTHWEIGHT:</i>	A birth wherein the birth weight is less than 2,500 grams (5 ½ pounds).
<i>MARRIAGE:</i>	A formal mutual relation of husband and wife that is filed with the County Recorder in the county where the license was issued.
<i>NEONATAL DEATH:</i>	Death occurring to infants in the first 27 days of life.

OCCURRENCE

(COUNTY OF):

Data allocated by the location of where the event actually occurred.

PERINATAL DEATH:

Death occurring to a fetus of 20 weeks gestation or more, including infant deaths occurring within 27 days of life.

PRENATAL CARE:

The care received by the mother from a health professional or midwife during the length of the pregnancy.

RESIDENCE

(COUNTY OF):

The usual residence of the individual. For deaths, this is defined as the usual residence of decedent as indicated on the certificate. For births and fetal deaths, the residence is defined as the usual place of residence of the mother.

UNDERLYING CAUSE

OF DEATH:

That disease or condition which gave rise to the chain of morbid events leading to death, including the circumstances of an accident or violent event that produced a fatal injury.

S.I.D.S.:

Death due to Sudden Infant Death Syndrome.

FORMULAS FOR RATES

<i>Abortion Rate</i>	=	$\frac{\text{Number of Abortions} \times 1,000}{\text{Total Live Births}}$
<i>Cause-Specific Rate</i>	=	$\frac{\text{Number of Deaths from a Specific Cause} \times 1,000 \text{ or } 100,000}{\text{Population}}$
<i>Crude Birth Rate</i>	=	$\frac{\text{Number of Births} \times 1,000}{\text{Population}}$
<i>Crude Death Rate</i>	=	$\frac{\text{Number of Deaths} \times 1,000 \text{ or } 100,000}{\text{Population}}$
<i>Divorce Rate</i>	=	$\frac{\text{Number of Divorces and Annulments} \times 1,000}{\text{Population}}$
<i>Fertility Rate</i>	=	$\frac{\text{Number of Live Births} \times 1,000}{\text{Female Population (15-44)}}$
<i>Fetal Mortality Rate</i>	=	$\frac{\text{Number of Fetal Deaths} \times 1,000}{\text{Total Number of Live Births and Fetal Deaths}}$
<i>Infant Mortality Rate</i>	=	$\frac{\text{Number of Infant Deaths} \times 1,000}{\text{Total Number of Live Births}}$
<i>Low Birthweight Rate</i>	=	$\frac{\text{Number of Low Birthweight Births} \times 1,000}{\text{Total Number of Live Births}}$

Marriage Rate = $\frac{\text{Number of Marriages X 1,000}}{\text{Population}}$

Neonatal Mortality Rate = $\frac{\text{Number of Neonatal Deaths X 1,000}}{\text{Total Number of Live Births}}$

Perinatal Mortality Rate = $\frac{\text{Number of Perinatal Deaths X 1,000}}{\text{Total Number of Live Birth and Fetal Deaths}}$

Post-Neonatal Mortality = $\frac{\text{Number of Infant Deaths and Neonatal Deaths X1,000}}{\text{Total Number of Live Births}}$

TECHNICAL NOTES

RACE AND ETHNICITY: Hispanics are an ethnic group, not a race, and may include all races within their ethnic classification. In this report, Asian-Pacific Islander, Black, Native-American, and White exclude Hispanics; therefore, no duplicate counting exists.

POPULATION DATA: The Nevada population data are based on the database established by the Nevada State Demographer's Office and the Nevada Department of Taxation.

COUNTY COMPARISONS: The population size of the counties in Nevada is widely varied, from one thousand to over one million. Because of these differences, caution should be used when interpreting the rate comparisons for counties.

REGIONAL COMPARISONS: Eighty five percent (85%) of Nevada's population resides in the urban areas of Clark (Las Vegas) and Washoe (Reno) Counties. In this report, data are stratified into three regions within the State as follows: Clark County, Washoe County, and Rural Counties (all remaining 15 counties).

METHODS FOR AGE ADJUSTMENT AND STATISTICAL ANALYSIS OF MORTALITY

RATES: In order to make meaningful comparisons between mortality rates for the residents from different regions or from different race/ethnic groups, differences in the age characteristics of the populations should be taken into account. For example, one would expect that the mortality rate for heart disease would be high in a population that has a high proportion of older individuals. Age-adjustment is the application of the age-specific rates in a population of interest to a standardized age distribution in order to eliminate the differences in observed rates that result from age differences in populations compared. This adjustment is usually done when comparing two or more populations at one point in time or one population at two or more points in time.

From 1990 to 1995, Nevada was by far the fastest growing state in the nation and Las Vegas was the fastest growing metropolitan area in both Nevada and the nation. The 1990 population of 1,201,000 grew by almost 32% to 1,582,000 in 1995 and is projected to surpass two million by 2001. The vast majority of growth has been by in-migration. The Las Vegas and Reno metropolitan areas contain more than four out of every five (84%) of the state's residents.

The age mix of Nevada's population varies from the nation as a whole by having a higher share of people in the age groups between 25 and 45 and a lower share of elderly persons. In 1995 about 88% of Nevada's population was White including persons of Hispanic Origin, which is the fastest growing ethnic group in the state.

POPULATION

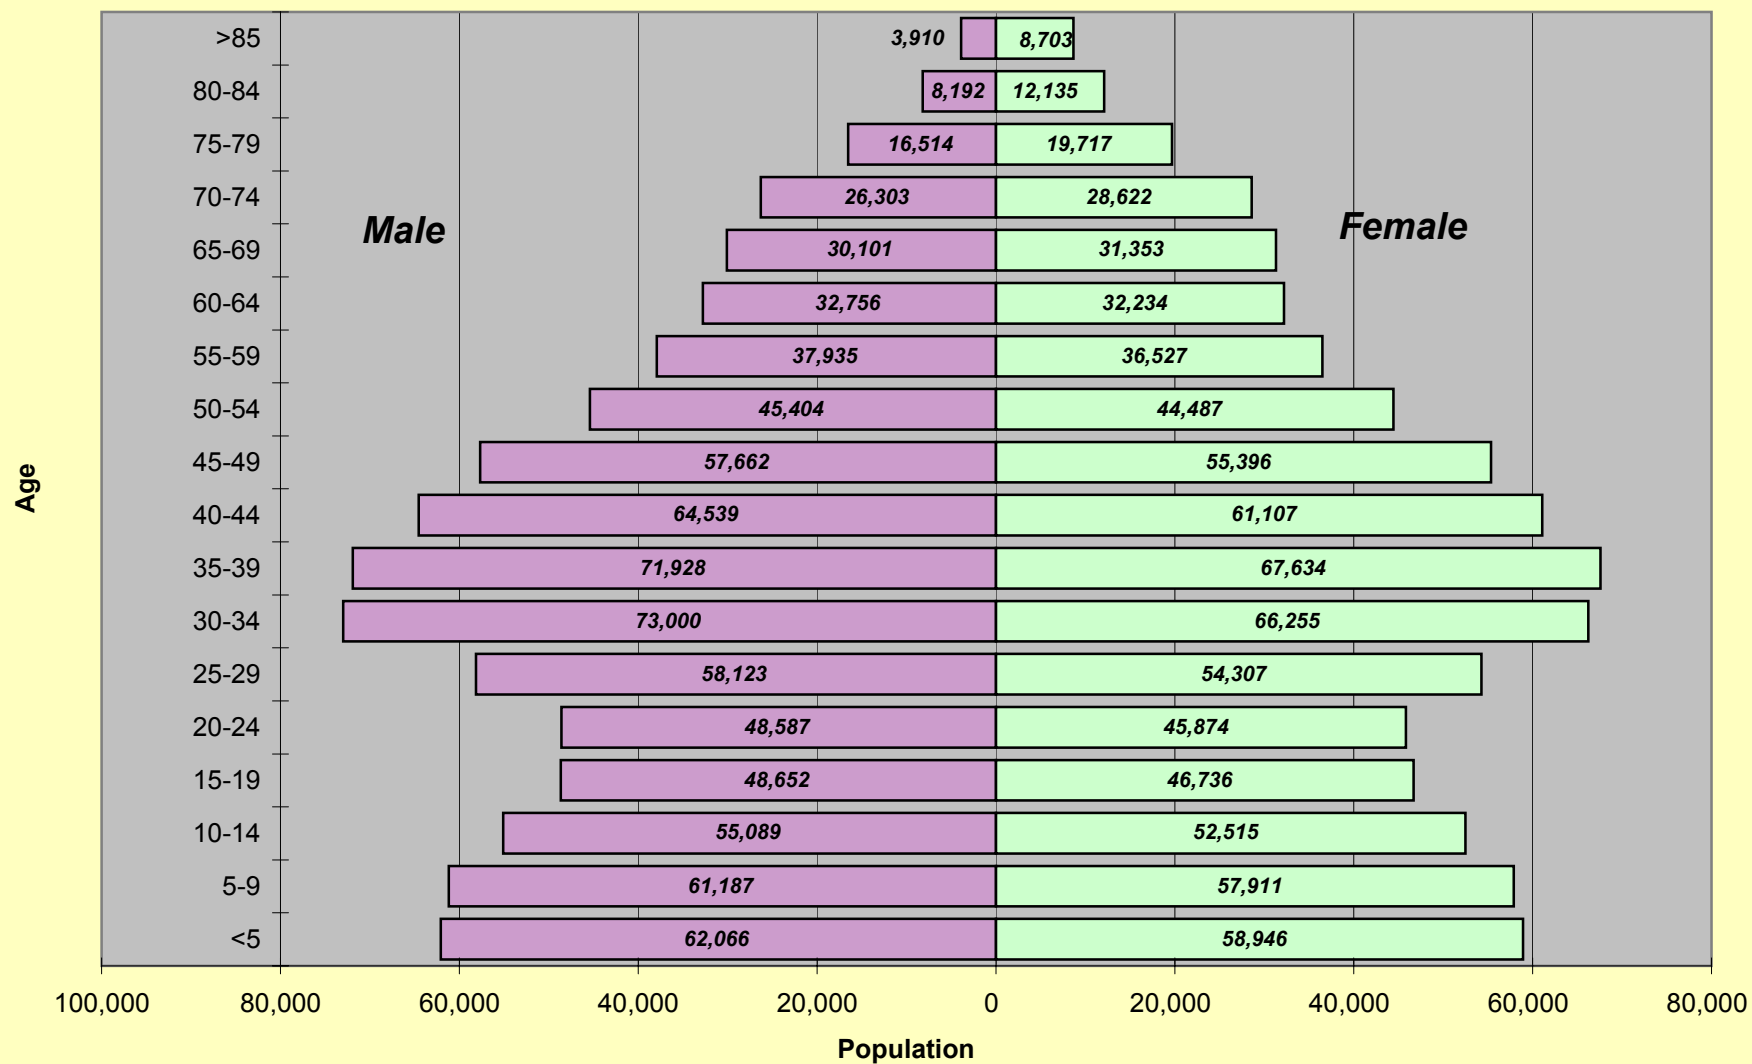

Figure 2. Population Growth in Nevada by County/Region of Residence, 1980-2000

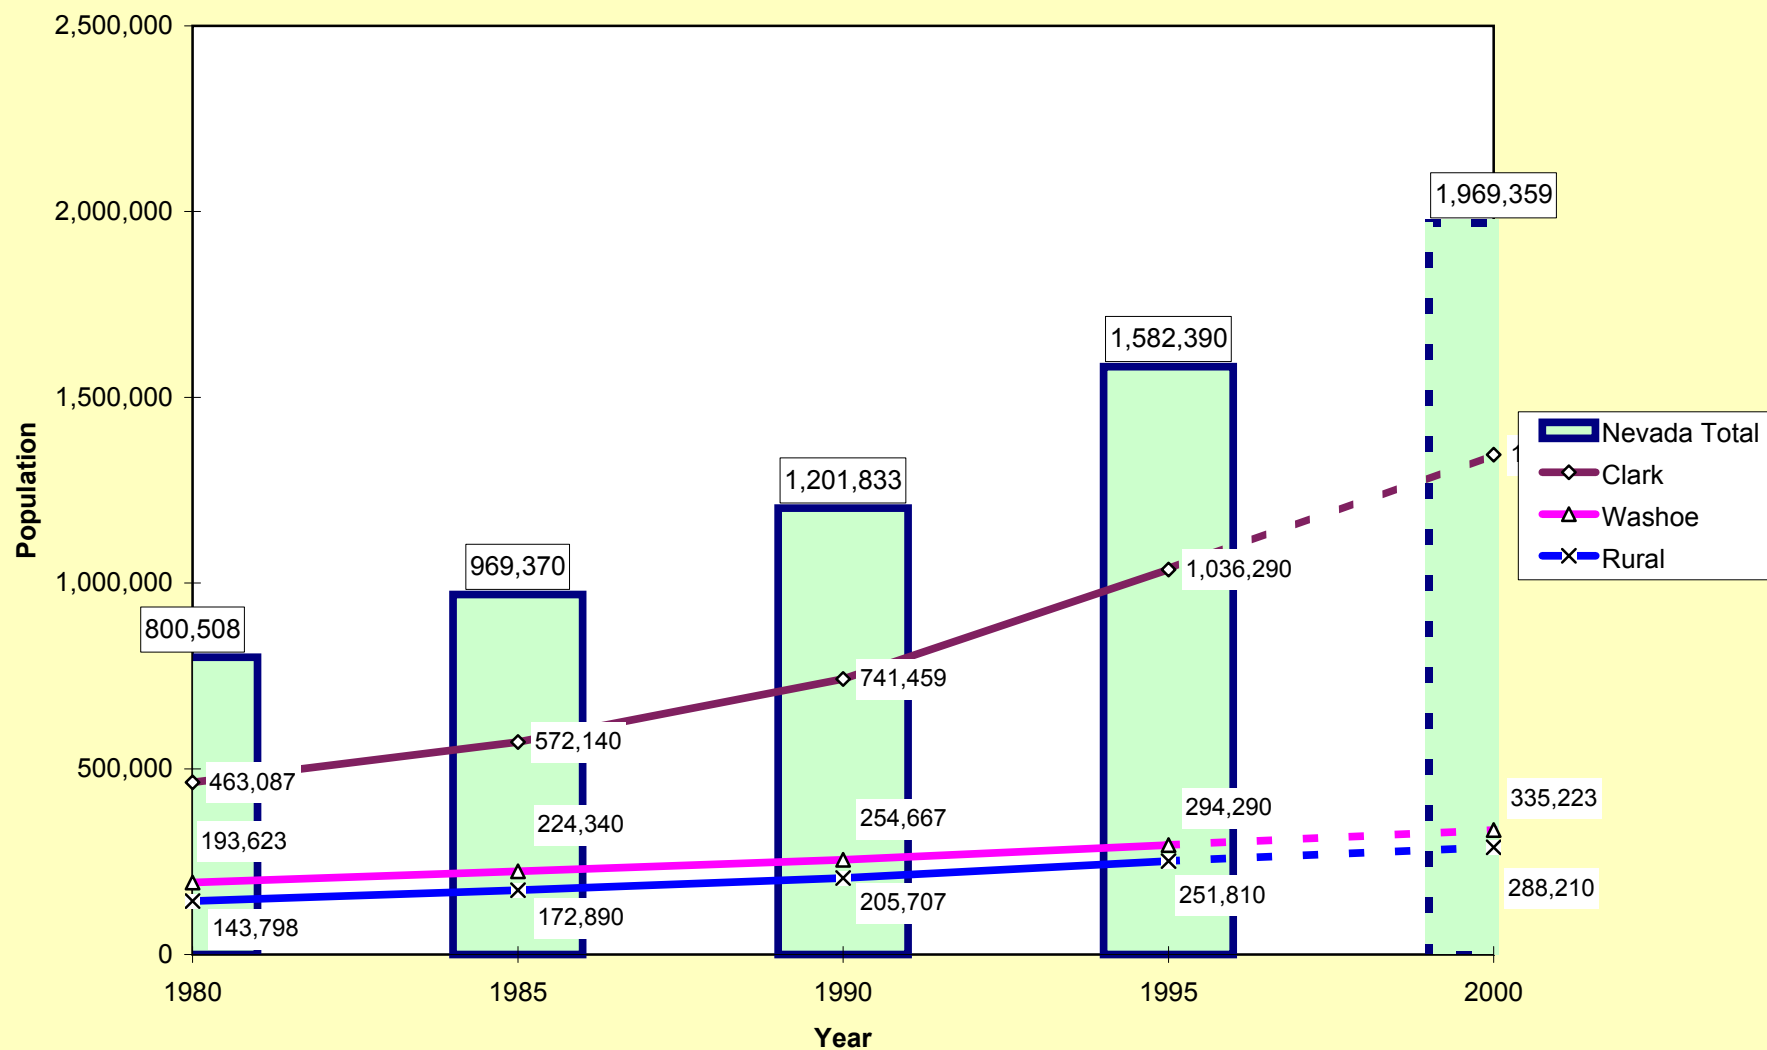

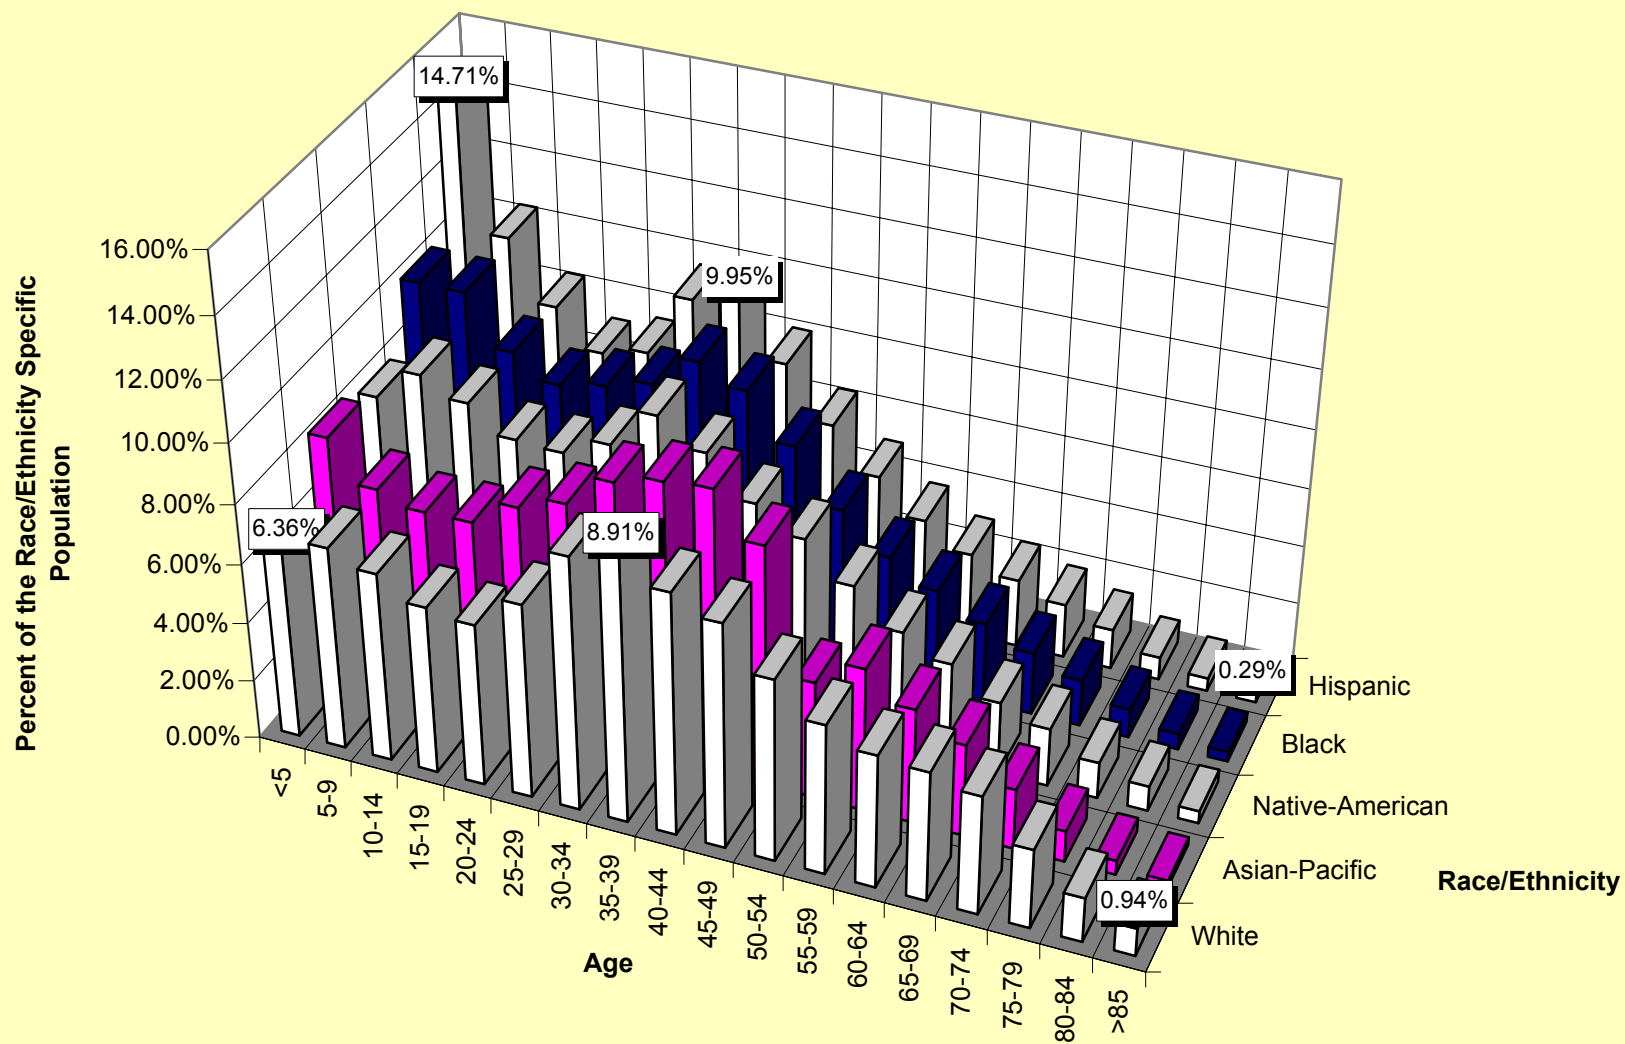

Figure 3. Percent of the Population in Nevada by Age for Race/Ethnicity, 1995

Nevada experienced an increasing birth rate from 1985 to 1990 followed by a moderate decrease in the rate through 1995. There were a total of 25,175 live births in Nevada in 1995. The crude birth rate for Nevada residents was 15.9 per 1,000 population, while the Hispanic ethnic group had a crude birth rate of 33.7 per 1,000 population.

The incidence of low birthweight babies in Nevada was 7.9% in 1995. Among the race/ethnic groups, Blacks had the highest low birthweight rate at 14.6%.

Recorded outcomes of resident pregnancies include live births, fetal deaths, and induced abortions. Between 1994 and 1995 births increased by 4.7%, fetal deaths, however, increased by 21.0% from 143 to 173, which reversed a recent downward trend.

Induced abortions showed a slight increase overall between 1994 and 1995, but the rate remained about the same. The teenage share of abortions remained constant at approximately one out of six overall. In 1994 and 1995 approximately 20% of pregnancies among Nevada residents resulted in induced abortions.

Disease of the heart and malignant neoplasms (i.e. Cancers) ranked one and two for the leading causes of death in 1995 in Nevada. In 1995 these two diseases caused death for 6,582 Nevadans, accounting for 53.4% of total deaths in the State. However, these two causes accounted for slightly lower death rates in Nevada than nationally, when age-adjusted comparisons were made. Other comparisons of leading causes of death between Nevada and the national average show that Nevada has higher death rates for Chronic Obstructive Pulmonary Diseases (COPD) and Suicide.

Racial/ethnic group comparisons indicate that Blacks had the highest death rates for total causes of death, diseases of heart, malignant neoplasms, and Cerebrovascular disease, while COPD was the highest among whites.

In 1995, Nevada's suicide death rate was twice the national average (age-adjusted rate: 23.5/100,000 (NV95) vs 11.3/100,000 (US93). Nevada continually ranked highest in the nation during the past 10 years. Regional, racial/ethnic, and age analysis showed the highest suicide death rates were among rural counties, Native Americans, and the age group of 75-84 years.

Nevada had slightly higher than US average for death rates of motor vehicle crashes in 1995. The highest groups were rural counties, Native Americans, and two age groups: age 85 and over and age 15-24 years.
